

T·A·P® JOISTMATE™ SAFETY PLATFORM

TAP® JoistMate™ Safety Platform...Safety and Stability for Every Insulation Job

The TAP® JoistMate™ Attic Safety Platform is used by pest control operators and insulation technicians across the nation to traverse wooden attic beams safely. Exposed wooden beams in many attics pose a safety threat and navigational challenge for anyone working in the attic. Easily portable, the JoistMate™ can be secured in place between either 16-inch on center or 24-inch on center joist spacing. The platform is made with three polycarbonate stabilizer bars underneath which helps to keep the unit from moving while supporting a person's weight. A convenient shoulder strap is included for easy carrying.

Each 21" x 26", lightweight and impact-resistant platform weighs only 10 pounds yet can support up to 700 pounds. The TAP® JoistMate™ Safety Platform is the lightest attic platform on the market. High-visibility and high-friction striping ensures that the user can readily see the boundaries of the platform, even in low-light conditions.

Put your safety first with the TAP® JoistMate™ Attic Safety Platform!
