

**Chemical plugs must be inserted into the jug prior to use.**

1. Insert the plug into the neck of the bottle and firmly press down until it is flush with the top of the jug.

2. Using your thumb, firmly press down on the outer edge of the plug until it has seated in the jug neck.

3. Place the chemical cap and hose back onto the jug.

The Chemical Plug Check Valves are designed to be reusable and can be extracted from an empty gallon jug to be used on another gallon of the same chemical. Do not reuse a Chemical Plug Check Valve on another type of chemical.
